SPECIAL TOPICS

1. (U) Special Training Opportunities. During 1984, NIC-12 was the Navy's management office for the following programs:

a. (U) Quality of Analysis. This program began in FY-84 with money from DIA to increase the expertise of individuals in GDIP funded billets who are engaged in general and scientific and technical intelligence analysis. In the FY-84 program, 23 projects were approved for six commands. Seven military and 18 civilian analysts participated at a cost of more than \$65K. Travel areas ranged from the People's Republic of China to U.S. Defense facilities. Increased participation in the FY-85 program resulted in requests totaling \$118K by 31 December 1984.

b. (U) Defense Advanced Language and Area Studies Program (DALASP). Established by DIA in FY-82, the DALASP was to be used to promote advanced training for intelligence analysts specializing in Third World areas. Based on service feedback, DIA refined the program during 1984 to allow language training to be conducted separately from area studies. Non-Third World languages were added if studied in conjunction with scientific and technical analysis. Two naval officers received a total of \$6,035 in 1984 for part-time language training and studies.

c. (U) Director of Central Intelligence (DCI) Exceptional Intelligence Analyst Program. Funded since 1979 from the DCI's Intelligence Community Staff budget, this program was created to improve the quality of intelligence analysis by giving promising midcareer professionals the opportunity to personally tailor a project to sharpen their analytical skills and provide for their professional development. Projects have included sabbaticals, university study, and independent research. Each year, approximately 15 military and civilian personnel participate at an average cost of \$25K per person. Early in 1984, one officer was selected from a field of three Navy nominations. In December, the program office nominated two officers for participation in the FY-85 program.
